ETHICAL VALUES **Pages:** 59-63 **Published:** 2016

Abstract: The paper regards the issues connected to architecture at water for and by women. It is about two pillars: water as a hazard and the way gender issues are considered in climate change adaptation and post-disaster reconstruction and water as heritage: the design of leisure architecture next to water or architecture objects such as thermal bathes. The needs of women have to be included in the architecture programmes which react to the presence of water, as well as in research programme dealing with this (ex. Horizon 2020). Architects' and researchers' mobility contribute to the fact that little cultural differences can be observed between the countries. We will concentrate on Romania and Italy. From the historical evolution conclusions can be drawn regarding architecture design today. Women can take different roles in the project: expert, user or investor. Other countries comparison can be made with are: Hungary, Bulgaria, Poland, Estonia, Germany, Austria, considering thus both the East and the West, which is relevant from the point of view of participation. From the historical evolution conclusions can be drawn regarding architecture design today. For this reason, apart of the pioneers, also contemporary women figures in architecture, be it research or practice, are included.

Abstract: The 7th edition of the LUMEN International Scientific Conference was a manifestation with a multidisciplinary character, whose general objective was to promote scientific excellence and encourage original research. This edition aims to bring into debate the current frameworks of multidimensional education and professional development, under the considerations of ethical valuing in a global and multicultural context.

The LUMEN conference gathered together international academics, practitioners and experts from Brazil, Greece, India, Bosnia and Herzegovina, Italy, Malaysia, Iran, Ukraine, Oman, Moldova, Poland, Russian Federation, Turkey, Mexico, Sweden, Egypt, Lithuania, Macedonia, Algeria, Norway, Mytilene, Israel, the United Kingdom and Romania, who had an interest in subjects from across domains such as social work, sociology, methodology, psychology and educational sciences, management, politics, European studies, law, applied philosophy, and communication sciences.

We are honoured to announce a total of more than 270 works submitted in the form of oral, poster or virtual presentations, on the part of 420 authors affiliated with universities, centres and research institutes in the above-mentioned countries.

Abstract: The pedagogical objectives of learning the history in Romanian school can be accomplished in different educative contexts, especially virtual context one. Our paper demonstrate that the interest for history is employ by new electronic communications; technology must be used in order to help the learning process. Also, the cybernetic space has the incontestable gift of potentiating the right to expression, the freedom of speech.

The activities are enjoyed by the students who show interest for the online space, for the temptation of the virtual world, for maintaining the connection to the teacher and the colleagues after finishing the actual lesson, for appreciation and encouragement for their creativity, and also for acknowledging and valorising their work at a larger scale.

Abstract: The utility of the new multimedia applications is undeniable in the modern society and that is why the project, "New skills on the use of

multimedia applications, web 2.0 and virtual instrumentation - a guarantee of the quality of academic qualifications (EduWeb)" has a very big importance both for the students, but also for the teachers who trained the students.

The results of this project and the courses designed for the students related to how to apply the new technologies, like web 2.0 and virtual instrumentation, are very important for the future of those who participated at this project, because the learned information might change the way of thinking of those involved in the educational system.

In addition, another objective of this project, the accreditation of a new license program and promoting ICT specific courses in master and license programs that already exist, offers great opportunities for all the students of the University to understand the importance of using multimedia technologies in every domain of activity.

We will concentrate in this paper on the results revealed by applying the sociological specific tools that helped us developing an impact study, results which undoubtedly will make an important contribution to the introduction of multimedia and virtual instrumentation courses in as many bachelor and master programs.

Abstract: Several Romanian projects target to the train of school teachers with the final goal to professionalize the teaching activity, in-line with the new teaching methodologies and modern technologies. In this respect, the POSDRU Project "ProWeb - A Network for Teachers' Continuous Professional Development in order to Use Multimedia, Virtual Instrumentation and Web 2.0 in the Curricular Area of Mathematics and Natural Sciences" tried to improve the knowledge of the in-service teachers from the area of Mathematics and Natural Sciences, together with primary teachers, on designing and implementing in classrooms of innovative teaching tools, considering multimedia and virtual experiments as main ICT instruments.

The analysis performed in this paper refers to the various ways of using ICT and modern technologies in the educational process, and their particular applications in classrooms. The analysis is a sociological one and seeks to measure how teachers involved in the curricular area of Mathematics and Natural Sciences, but also those who teach in the Primary School, use multimedia and virtual experiments, and introduce ICT instruments in the teaching process of their specific disciplines. The results of the study are focused on some values that stimulate and encourage further research in this field.

Title: Child Rights Education in School

Author(s): Anghel, A (Anghel, A.); Dogaru, M (Dogaru, M.); Lupu, RN (Lupu, Neacsu R.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 27-30 **Published:** 2016

Abstract: The foundation of any civilized society is given to education at all levels, and a priority of the XXI century is the children's rights education. It circumscribes the two basic directions - "Education for democratic citizenship" (EDC) and "Human rights education" (HRE).

The research aims to analyze the concrete actions taken in school in order to understand / knowledge and to promotion the child rights to the students. They were set up as research hypothesis, the following explanation: whether the curriculum's content is designed teaching about fundamental rights of children, then the children correctly identify instances of non-compliance with fundamental rights in any social context they are.

Research is mixed: quantitative and qualitative. People investigated are heterogeneous, composed of schoolchildren, educators and parents, who come from different areas of residence: rural and urban.

The hypothesis is unconfirmed, after analyzing and interpreting the findings.

Research findings are: children's rights are known mostly by students; school popularized by various means their internal regulations, processes them to the students, and provide them with factual information about their rights and responsibilities at school. Students appreciate that their rights are recognized informally. Formal, there are no identified children's rights violations. The explanation reflects systemic issues mentioned research.

Title: The Impact of Legislative Amendments in Financing National Education in Romania

Author(s): Antohi, VM (Antohi, V. M.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 31-35 **Published:** 2016

Abstract: The development of modern societies and education became dependent on the human assets in a proportion concurrent to the economical and financial assets.

The study herewith presents an impact analysis of the evolution of Romanian educational system financing, upon the implementation of the improved

education law.

In our times, education development involves facing new social and financial requirements and a pressure to improve the activity and performances by applying changes of a structural nature, with significant financial needs. The underfinancing registered in the last years has seriously impacted financial stability of education institutions.

In a society of knowledge, like the contemporary developed societies, school as a social institution, invested with the role to promote knowledge and values has a fundamental position.

In this context, the extent of a society's development may be emphasized not only by the economic and financial indicators, but also by indicators related to the level of education, to the way knowledge and learning are organized, to the types of performance expected, to the quality of educational activity, and to the ways in which it is supported by economic and financial policies.

Title: The Authority of a Final Decision of the International Judicial Decisions

Author(s): Barbu, D (Barbu, D.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 37-41 **Published:** 2016

Abstract: The judgment holding the power required is an international jurisdictional act which contains a final disposition of the application of international law in the case of a particular legal relationship, which resolves a contentious situation.

The authority of the international judgment is that its availability cannot be disputed by the parties. It consists; generally, of a normative enunciation indicating the behavior of the parties should take into account, and the individual norm resulting is compulsory. Most often, this constant is a situation, whose existence should be respected by the states, beating the individual character rule, being opposed to erga omnes.

We must remember that a judgment has the power that generates decision if produces the following legal consequences: exclusivity, prejudice and performance. These effects relate to three aspects: the component of the decision towards the authority of res judicata, the subjects of law to which the decision becomes compulsory and the extent of the effects of an international judgment.

Title: Danger to the Public Order - an Essential Condition in Taking and Differentiating Preventive Measures

Author(s): Barbu, D (Barbu, D.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 43-46 **Published:** 2016

Abstract: The aim of preventive measures is to ensure the smooth process of criminal proceeding, when there are reasonable suspicions that the suspect/defendant is evading from prosecution/Court, attempting to obstruct justice or commit other acts prescribed by the criminal law.

There are a number of opinions in judicial practice relating to the phrase, "danger to public order". So, this phrase means a state and not a fact that could jeopardize the future of normal social relations. The circumstances and the method of work, the seriousness of the criminal facts and the limits of punishment provided by law cannot constitute the only basis for appreciation of the danger for social public order.

We must remind ourselves of the necessity and proportionality of the preventive measure taken because for the same cases as referred to in the article 223 letters a, b, c, d, Code of criminal procedure. It may be ordered the preventive measure to house arrest and the preventive measure of preventive arrest.

Title: The Presumption of Innocence

Author(s): Barbu, D (Barbu, D.); Barbu, FO (Barbu, F. O.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 47-50 **Published:** 2016

Abstract: The presumption of innocence is perhaps one of the most ancient procedural warrants in criminal matters, being a constitutional principle, according to which, up to the final judgments of conviction, a person is considered innocent.

Regarding the legal nature, the presumption of innocence poses a number of problems. One of these problems is if you can discuss a relative or an absolute presumption, although it is clear that the presumption of innocence of a person can only be a relative one. However, the character of this presumption is relatively somewhat mitigated by the fact that overturning the presumption cannot be made solely by a judgment of criminal conviction, even if it can be substantiated by any evidence. Any other legal act, no matter how it comes, could lead to establishing a person's guilt.

Another issue is raised by the knowledge of non-compliance with the presumption of innocence of the sanction, as a result of its legal nature. Due to the multitude of acts whereby can be affected, the answer is different depending on the Act by which the person's presumption of innocence has been violated, aspects which will be treated separately.

The presumption of innocence is closely related to the concept of impartiality of the Court, in order to guarantee the presumption of innocence, there is the

article 6 paragraph 2 of the ECHR, according to which the representatives of the State to refrain from making public statements, having the effect that the defendant is guilty of committing certain criminal offences. This obligation does not imply, however, that the authorities refrain from informing the public about ongoing investigations, but must use formulations of that guilt does not result in individuals being investigated, using terms such as "suspect", "there is suspicion that", etc..

Abstract: The European project ENGAGE (Equipping the Next Generation for Active Engagement in Science) aims to increase awareness of responsible research and innovation (RRI) through inquiry based learning (IBL) by reaching in Europe more than 12.000 teachers and 300.000 students. This paper reports the pedagogical and technological design related to ENGAGE Knowledge Hub, which is a multilingual platform to equip the next generation of educators and students for active engagement in Science. The approach for evaluating the design of ENGAGE Knowledge Hub include qualitative data from comments and feedback presented by its participants as well as quantitative data from user analytics. The ENGAGE preliminary outcomes indicate some challenges and strategies developed during the first year of the ENGAGE project. Some functionalities of Knowledge Hub might help teachers in engaging with the ENGAGE community such as liking, which provides very fast feedback and reviewing materials that even requires more time from teachers, they might feel encouraged to do it when they feel part of the ENGAGE community.

Title: Main Considerations and Types of International Valuation Standards Used in the Assesment of an Organization

Author(s): Bran, C (Bran, C.); Gavrilă, L (Gavrilă, L.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 65-71 **Published:** 2016

Abstract: Establishing the value of an organization is a complex task, resulting from an assessment process in accordance with International Valuation Standards (IVS). According to the standards in place, value is not an intrinsic feature of an asset or good, but it is created in the minds of people that constitute the market of that asset or good. The basis of the valuation methodology, the "present value" of assets and "return value", jointly determine "the value of the organization". Starting from this concept, the new assessment standards for the company's valuation classify methods into three categories, in Romania, as follows: valuation methods based on asset, based on revenue and through direct comparison (the market value). The conclusion is that the value of an organization is changing in time, meaning that the value determined by IVS standards is strictly valid on for the intended purpose.

Title: Aspects on Investigation at the Scene in Case of Deadly Work Accidents Occurred as a Result of Explosions

Author(s): Bulea, EA (Bulea, E. A.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 73-78 **Published:** 2016

Abstract: Under the auspices of an industrial epoch marked by automatism and technology, the reality nowadays has not unfortunately excluded events such as deadly work accidents occurred as a result of explosions. The humanity's remarkable technological progress has generated the emergence of new risks of work accidents. However, the same progress has succeeded in reducing the potential and extremely destructive danger of explosions only to a very low extent. With the help of a descriptive analysis of such events and of the logical ratiocinations, the article proposed will explain: the mechanisms of explosion occurrences which generate work accidents, the rules and the stages followed in the investigation of the scene of the work accidents caused by an explosion, the collaboration between the criminal investigators and the specialized staff present at the scene in order to discover the causes of the deadly work accidents occurred as a result of the explosion.

The study aims to identify and lay stress on the specific tactic investigation rules used in case of such events in relation to legal provisions in force and to emphasize the need to enforce them with a view to obtain the evidence useful in discovering the causes of the deadly work accident caused as a result of the explosion.

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 79-82 **Published:** 2016

Abstract: Romanian retail market is an evolving market due to the fact that Romanians are becoming increasingly familiar with the use of modern forms of communication and purchasing products from the online stores. The scope of this paper is to highlight some aspects regarding the Romanian retail market, to analyse the current state of Internet commerce in Romania and the differences between rural and urban areas in Romania related to this subject. In addition, during this paper we will highlight the Romanian Internet retail prospects and some marketing considerations about this subject. All data in this article were collected from Euromonitor studies regarding retailing in Romania. After analysing this data, in this paper we propose some suggestions about developing this subject.

Title: Degressive Proportionality in the European Parliament: Gainers and Losers

Author(s): Cegielka, K (Cegielka, K.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 83-86 **Published:** 2016

Abstract: The introduction of the principle of digressive proportionality in the distribution of seats to the European Parliament results from the very large variation in the population of the Member States. Limiting the total number of deputies while ensuring adequate representation of the smallest countries contributed to the adoption of the principle of European solidarity. According to it, more populated countries receive a smaller number of seats than that which would result from the division of proportional representation. This means that less populated countries gain at the expense of the more populated ones. But there is no recommendation stating who should be regarded as the more populated and thus who gains and who loses as a result of replacing the proportionality by degressive proportionality. The aim of the paper is an univocal division of the Member States between the gaining and the losing ones. It was achieved by the introduction of the balanced function which for the first time associates degressive proportionality with the classical concepts of fairness, i.e. equality and proportionality. Consequently we indicate which countries should transfer their seats in favor of the others. None of the methods previously proposed in the literature has such property.

Title: The Concept of Freedom and the Concept of Power in the Rule of Law

Author(s): Ciongaru, E (Ciongaru, E.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 87-90 **Published:** 2016

Abstract: The rule of law defines one of the characteristics of the form of a democratic regime of government from the viewpoint of relations between state and law, and power and law, by ensuring the supremacy of law and of the fundamental human rights and freedoms in the exercise of power and must implement the supremacy of law both in the relationships with citizens and in the relationships with the government entities. Thus, the exigency and manifestation of the state involves a certain statute of power, limited if possible, in order to prevent it from becoming a prerogative at the discretion of those exercising it. The freedom of every person must be guaranteed at the same time, meaning that everything that does not affect the other may be done, exemplifying in this respect the situation when the exercise of natural rights of every human being does not have any limits, except those providing the exercise of the same rights for other society members, limits that can be determined only by law. Freedom and power as governance practices are in an opposite position and each of the two concepts may be considered as the remedy of the other. Along the evolution of history, society's political organization, mainly by its main institution, the state, was achieved more and more based on the perfection of state structure in relation to the natural and legal persons of the state and of some rigorous legal norms that established both their freedoms and rights and the obligations and limitation of power of the state organisms to act in the spirit of the legal norms. The name of rule of law itself indicates that the state exercises its political power based on legal norms by using the force of argument and not the argument of force.

Abstract: The article deals with implementing and expanding CLIL programs in faculties focused on management engineering curricula in step with the European requirements and their corresponding forms of documenting, acknowledging and using educational outcomes on the worldwide labour market. The specificity of Romanian academic education, as revealed in our analysis, consists in: students interested in CLIL programs developed mainly in English, with good command of this idiom, but facing gaps in proficient information processing; teaching staff less interested in this methodology, as it is perceived as time-consuming, far more demanding than it is rewarded, and lacking resources for materials and new didactic strategy trainings. Our paper discusses motivation and benefits in such CLIL implementation, with a clear focus on enhanced English communication competence.

Title: Multidimensional Education via Student Symposia

Author(s): Cismas, SC (Cismas, S. C.); Dona, I (Dona, I.); Andreiasu, GI (Andreiasu, G. I.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 97-101 **Published:** 2016

Abstract: CLIL (Content and Language Integrated Learning) is aimed at improving language competence by studying content via different perspectives, thus enhancing learners' confidence in the target language and in the scientific subject taught interactively, by active study in schemes and dialogue; it is expanding rapidly in both public and private academic education across Europe. This paper reports on USAMV MIEADR Students' Scientific Symposium outcomes analysed according to CLIL principles by implementing CLIL and CEFR Assessment Criteria established at EU level. We outline the different steps involved in the practical implementation of the proposed approach, including choice of topics, linguistic content, tasks and strategies, and we describe the ways in which CLIL can be used both in seminars and in fieldwork for teaching certain subjects and for acquiring practical experience with leading professionals. Learners gradually build up self-confidence for communication, reaching positive outcomes in terms of learning the language and content subject. The courses are particularly useful to those students who want to participate in fieldwork. They are offered the possibility of enhancing the competence achieved in the second language and are constantly exposed to the idiom, gaining experience by working side-by-side with leading researchers in the discipline and communicating with their peers from the same or from other countries, within student-exchange formats.

Title: Multicultural Education via Specific Learning Styles

Author(s): Cismas, SC (Cismas, S. C.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 103-106 **Published:** 2016

Abstract: The concept of learning style focuses on the type of preference for study methods and retaining of what was learnt; it describes ways in which the acquisition process becomes long-lasting, fast and effective, including the preferred way of receiving, processing, storing and maintaining the data and the skills developed simultaneously throughout the learning experience. The hereby investigated foreign idiom curriculum for academic levels in business engineering proved to contain sufficient elements of education for values, democracy and multi-culturalism, seemingly compensating for other subjects. Moreover, elements of unprejudiced education seem to increase knowledge of language, history, culture and civilization. Active integration of foreign language skills developed in formal and informal areas lead to significant increase in communication quality and in professional competence at the workplace. In order to use new methods, to enforce new curricula, and to actively teach on a communicative basis, professors need to retrain themselves according to the inter-cultural challenges present nowadays in the global village created by the knowledge society.

Title: Business English Linguistic Structures Used in Technology Transfer

Author(s): Cismas, SC (Cismas, S. C.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 107-111 **Published:** 2016

Abstract: Our society has been transformed by consumerism in the era of information. Market relations and business mentalities have spread worldwide, overwhelming the former communist republics and the emerging economies. Throughout the world, business has become one of the most powerful engines of social development, taking up an increasing role in people's lives and creating new areas of social thought. Business has required some applied transformations of English linguistic structures to suit the multitude of professionals from numerous cultures that use it as the new lingua franca able to serve modern verbal and communication needs. Hence within the frame-work of management and organization theories a novel field appeared focusing on business communication and business sublanguages, such as bargaining communication, negotiation interactions, the language at work, and the language of trade and transfers. The recent accelerated info-technological development of society triggers enhanced interdisciplinary interaction of separate knowledge areas and stimulates new perspectives of cross-border disciplines emerging in such contact zones among sciences. The sublanguages of business engineering and business communication have their specific properties that require linguistic examination. Many researchers have noticed that business

texts possess specific and distinct characteristics as compared to other typologies; therefore the business discourse reveals its own communicative, pragmatic, lexical, syntactic, textual, composite, visual-graphic, normative, and genre-stylistic features.

Title: Unworthy Heritage Institution and the Influence of Civil Code of Quebec in Matters

Author(s): Ciuca, LB (Ciuca, L. -B.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 113-116 **Published:** 2016

Abstract: The modernization of a state is achieved in legal matters by regulating some new social relations and by building some mechanisms to respond to the current social requirements. In the context of creation the European Community area, but especially following the accession of Romania to the European community, the legislative reform became a necessity. From this perspective, with the change of Romanian civil legislation, both members of committee who participated in drafting the bill regarding the amending of the Civil Code, and the members of the special Committee, took into account the objectives set at European level by all Member States, but also took into account the happy experiences, or not, of those states that have gone through a similar process of reform.

As we find from reading the Civil Code in force, and following the conclusions arising from the debate of the special Committee established at legislative level, we can say that this process of reform of the civil rule was influenced and inspired by several community or extra-community national legislations such as the French, German, Italian, Spanish, Swiss, Brazilian and Canadian. We may firmly say that the dominant model in the process of amending the Civil Code was the Civil Code - Quebec province. Within those influences we outline in this material the amendments that are found in the Civil Code in force, amendments in matters of unworthiness of succession and the removal of its effects. The Law in force and the doctrine establish the unworthiness of succession as civil penalty, even if we found in the Civil Code of 1864, in the actual form of the code we identify under two forms, namely legal unworthiness and judicial unworthiness as it is found in art. 958 and art. 959 of the Civil Code. Although the source of inspiration is the text from Civil Code of Quebec, the institution of unworthy forgiveness was taken over incomplete due to excessive caution of Romanian legislator, leaving unresolved some existing situations in the real life. Therefore in this work we find some critical accents and the proposal of *lex ferenda*.

Title: Context and Meaning. For a New Rhetoric of the Public Discourse

Author(s): Ciulei, T (Ciulei, T.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 117-122 **Published:** 2016

Abstract: There is no doubt that the public discourse can be interpreted as a consequence of an epistemic relation between knowing reason and the world to know, as the foundation of understanding and rapprochement between the immediate reality, as a rhetorical theme or as a principle of social-political decision-making. Being these some of the perspectives from which the public discourse can be considered, as right, its interpretation being exclusively an epistemological one.

This is the thesis work, and assuming that the public discourse, in any of the above cases would be, is founded and true, we shall see to what extent the context, but mostly the significance, may alter or conversely may increase its alethic availability. And this sentence implies a more profound one: that interpretation has an ethical dimension, too. In other words, contrary to the belief that the interpretation can evade the constraints of pure objectivity, of the pure privilege of bias, can be found codes and schemes of interpretation so that it become commensurable. In the public discourse the consequence would be that you cannot say anything about any assert, without ethical implications. The scheme of interpretation does not necessarily imply a certain formalism of the decryption of the message, but put the comprehensive act more or less around the truth.

Abstract: Education has always been a sensitive issue because the economic, socio-cultural and technological changes have brought an important paradigmatic shift: from the syntagm 'hands-on', related to traditional education to the syntagm 'eyes-on', related to a new type of literacy which implies the embedding of books within the pervasive medium of the screen. Within this context of the screen dominance, European citizens have turned into active prosumers who take part into debating current European issues. In this paper we intend to analyse two strands of debate on the Debating Europe platform, related to the future of the European education: the skill gap in education and the role played by MOOCs in the shaping of a new type of education. The two aims of this paper are: (1) to determine the word associations and co-occurrence networks delivered by EU citizens in their comments; (2) to identify the types of discursive (de)legitimation associated with the MOOCs and the skill gap, using the framework of critical discourse analysis.

Title: Cultural Diversity as a Normative Principle and the Right to National Self-Determination

Author(s): Cojanu, D (Cojanu, D.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 129-133 **Published:** 2016

Abstract: National self-determination has two main intellectual sources. The first is individual autonomy, which Kant interpreted as a prerogative of any rational and independent being. This concept was transferred by Herder to peoples, to nations, for he understood them as unitary agents of history, claiming their sovereignty. The second source is the principle of plenitude as tendency to actualize any possibility, which metaphysically legitimize the living world diversity and the ethno-cultural differences, the plurality of life-styles. Thus, the diversity (natural /social) is no longer merely a fact that can be noticed, but a normative principle and value. The effort of self-determination thus becomes and should be understood as a legitimate desire to preserve the cultural specificity of a people, what distinguishes it, its identity by difference. This study tries to identify the intellectual connections between the ideal of diversity, the moral intuitions that are associated with it and the social practice of national self-determination, both culturally and politically.

Title: Reflections on a Possible Axiological Universe of High-School Teachers

Author(s): Cojocariu, VM (Cojocariu, V. -M.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 135-140 **Published:** 2016

Abstract: The integration of youth in the contemporary society, strongly marked by the crisis of values, is significantly determined by the axiological matrix in which these are raised and educated. Pre/adolescence is defining for the crystallization of the values they will cherish and based on which they will act as adults. Their teachers represent one of the most relevant vectors for their cultural growth. Therefore, we consider it is extremely important to identify the values held by high-school teachers. The study aims to discover whether there may be highlighted a hierarchized set of values in which high-school teachers believe. The main method we have used was the questionnaire-based inquiry. We investigated a group of 150 high-school teachers from the rural and urban environment. We expect that the processing and interpretation of the results may enable the formulation of some conclusions regarding the defining outline of the axiological universe of high-school teachers, the presence of some major differences related to the moment of their initial training and the identification of some formative openings for teacher continuous training programmes/themes.

Abstract: The study aims to identify the needs of teachers related to the use of interactive educational platforms in the teaching and learning activities. The problem which started this study is the awareness of the risk caused by the low degree of using the interactive educational platform in carrying out teaching and learning activities. The questionnaire, applied to 280 teachers, was used as research method. The survey results indicate that most teachers do not use the interactive educational platform in carrying out teaching and learning activities. All results reconfirm the data of specialized studies and re-validate the idea of a continuous connection between the teacher training and the systematic introduction of new learning technologies.

Title: An Analysis of Multilingualism in Crimea's Tourist Industry

Author(s): Constantin, S (Constantin, S.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 147-153 **Published:** 2016

Abstract: The main purpose of this article is to determine the situation of multilingualism in Crimea's tourist industry. In March 2014 the Crimean Peninsula went through the process of changing sovereignty from Ukraine to Russia, amid criticism from other nations (mainly the EU and USA) related to the legitimacy of this process. Prior to this moment, there was a fairly well developed tourist industry in the area, mostly sustained by visitors from the two countries. Since the sovereignty change, one of the main objectives declared by the Russian authorities now in control of the area has been that of developing tourism even further. However, an important issue in international tourism that can decisively strengthen or weaken tourist competitiveness is the ability to interact with international guests and business partners; in other words, knowledge of foreign languages. To the aim of determining whether Crimea is ready to open its doors to international tourism more widely from a linguistic point of view, an analysis of linguistic skills in the field of tourism that covered more than 1,000 accommodation units was conducted. The results of this analysis, as well as a brief presentation of Crimea's tourist potential can be found in the following article.

Title: The Innovations to Improve the Digital Banking Performance in Romania

Author(s): Constantinescu, LM (Constantinescu, L. M.); Stefan, MC (Stefan, M. C.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 155-161 **Published:** 2016

Abstract: The banking institutions perceive the impact of the New Information and Communication Technology (NICT) differently, yet most of them view it as deep and fast, so that 2/3 of them believe that NICT solutions can contribute to a better rationalization of the logistics operations and even a considerable simplification of the chain supply management. 70% of the companies indicated the capacity of NICT of contributing to a profound change in the duties undertaken, which led to an acute need of training their employees in this area. The consumer's involvement level (high/medium/low) differs depending on how the product meets his specific needs. The transition from conventional to electronic payments system was favoured primarily by the significant increase in the activities developed by the payment systems and then by the need to fluidize cashless payments and meet the demands of consumers who ask for payments from sister institutions, at efficient and low costs.

Nowadays, a credit card is a payment instrument applied universally, accepted in all countries to provide a wide variety of transactions such as purchases of goods and services sold by licensed traders or obtaining cash. In Romania, the public can choose between several types of cards offered by banks or specialized groups and, furthermore, the current trend is to offer financial products by customer classes (based on revenue) and/or facilities.

This report aims an analysis of the development of the Romanian card market, especially after the last financial crisis and the banking digital instruments proposed by the banks of Romania to attract the potential customers. Our work aims also the marketing strategies implemented by the Romanian banks focus to growth of digital banking on the Romanian market because cash remains still the main payment method in Romania.

Abstract: In the present paper, we will enounce approaches belonging to Friedrich Daniel Ernst Schleiermacher's philosophy, highlighting the role that he played in hermeneutics, all the more so as he presents a hermeneutics which is totally different from the one belonging to preceding thinkers. Anchored in an eclectic, religious and also philosophical idealism, he analyzes the relationship between philosophy, morality, religion, raising some problems of the unity of cultural forms, more on the line of romantic aspirations, towards the fusion of these ones on the common ground of emotionality. These trends and directions that reveal in his work will be analyzed in the context of his era, namely in the universe of German spirituality. Last, but not least, we will highlight his attempts to reconcile the intelligence, the scientific knowledge and the religious feeling.

Title: Professional and Metaphorical Values of IT Terminology in Romanian Language

Author(s): Diaconu, DC (Diaconu, D. C.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 169-172 **Published:** 2016

Abstract: Reflecting the vocabulary instability, in general, words appear and disappear in concordance with the realities or concepts they designate. Regarding the I.T. vocabulary, we are watching a transposition into our language of a new lexical field, starting with one already established in a foreign language.

This paper aims at analysing the processes of our language taking this lexical field, adapting and integrating it (morphologically or phonetically), in the current Romanian vocabulary by loans, loan translations or translations. In the delineation of IT terminology, the computer metaphors are as interesting and numerous, as many of them are connected to the central, commonly used themes, in fact, to the common language. The import of terminology from English into Romanian, as in other languages involves problems of linguistic integration and standardization. The expansion of the Internet, e-mail, chat, messenger - and the access of a great number of people to all these, influenced the development of contemporary language, adapting the terminology to new situations of communication in I.T. vocabulary, going back and forth between standard and familiar language.

In the literature, the loan is the transfer of words from one language to another. These loans can be, on the one hand, terms which are phonetically

assimilated by the receiving language (in this case - the Romanian language) and terms which begin to be assimilated, on the other hand. Other terms are those which will never be fully integrated in the common vocabulary. Also direct loans and loans through an intermediary, or via a third language or by the media, are entering rapidly into our language.

Title: The Leadership Styles of School Principal Preferred by Teachers in Schools From Romania

Author(s): Dogaru, M (Dogaru, M.); Neacsu, I (Neacsu, I)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 173-176 **Published:** 2016

Abstract: There is a whole literature about leadership styles of school principals. What is the best leadership style of the principals for a school to become good? What kind of influence of the principal leadership style is made to the teacher's activity or to the student's outcomes? Research that we propose is qualitative and quantitative. It is interesting to find out if in the schools from Romania there is a link between leadership style of the principal and the schools efficiency measured through students outcomes.

Abstract: In the Romanian education system often talks about "good school" or what means the "successful school". We are witnessing on a daily basis at diverse hierarchies of schools, without having a clear record of what this means. Is the school successful only having the best results in final examinations? Or the one that has the most diplomas at Olympics competitions conducted at national level? The research that we propose is quantitative and qualitative, and follows the definition by teachers of the characteristics of successful school from Romania.

Title: The Shape and Symbol of the Magnificat in the Baroque Era - Pedagogical Implications

Author(s): Dragusin, HL (Dragusin, H. L.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 181-183 **Published:** 2016

Abstract: This paper tries to underline an analytical approach related to the musical creations from the Baroque period, by specifying the form. In this respect, it is pointed out on the Magnificat evolution as a liturgical genre, its structure in verses and the polyphonic style of composition. The baroque music, as a symbolic system, culturally defined, preserves the creative contributions and transforms or develops them by using a cognitive process, personal traits and motivation. The educational activity is considered a cultural activity and the musical and artistic education represents an important premise in the formation of an educated personality, as a result of multiple forms of knowledge and musical activity: creation - interpretation - reception.

In the paper, there are illustrated the factors that determined the shape and style of the genre, the musical modes most frequently used, but also the earliest cycles of the Magnificat. As exemplification, a discussion around the connection between the horizontal element and the vertical element in the Magnificat of J.S. Bach is made. Practically, the students' musical experience is enriched, due to the transferred knowledge and assimilation of music.

The educational valences of arts can be enhanced in the case of the artistic knowledge. In this sense, various results related to musical education are in correlation to the structural components of the musical culture, field that continues to develop if it integrates the complementarity of different perspectives addressed to itself. The experimental studies concerning the creativity and concentration are focused on a considerable area of features and elements, taking into account the complexity of culturalization.

Title: Regional Disparities of Romania's Demographic Behavior

Author(s): Dumitrescu, D (Dumitrescu, D.); Baltalunga, AA (Baltalunga, A. A.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 185-191 **Published:** 2016

Abstract: Demographic changes are a reality in Romania: the population is getting old and has been recording one of the lowest growth rates in Europe. In most localities, the birth rate is under the conservation threshold of 2.1 children per woman, while life expectancy is growing. The new demographic challenges of Romania (obvious demographic decline, marked ageing, accumulation of an immense destructive potential resulted from the stabilization of natality at a low level and the structural mutations that have contributed to changing the whole demographic structure) have generated new challenges but also opportunities. On the geographic level, one can note clear differentiations between the regions of the west and those in the east of the country, between north and south, between the urban and the rural ones, the only growing demographic trends being recorded around the big cities, while the number of inhabitants in most rural areas is decreasing. A major difference is given by the "capital-region effect" Bucharest-Ifov, indicating a special attraction, associated to higher investments and greater employment opportunities. The regional geodemographic disparities were identified by the temporal and spatial analysis of the specific geodemographic and economic indicators, by reporting them to the national and European average and their correlation, by identifying the causes that have generated them, the result being their representation in space.

Title: The Importance of Business Intelligence Implementation on Innovative Clusters

Author(s): Florea, CA (Florea, C. A.); Comsulea, I (Comsulea, I)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 193-198 **Published:** 2016

Abstract: In this new age of high-tech and connectivity, the barriers between activity domains have vanished, being replaced with partnerships. These collaborations flourish and become networks. The aim of this paper is to highlight the importance of cluster in long run development. Clusters provide innovative services and products, with a higher value added than other companies, due to the capacity of information absorption and technological transfer between its members. The paper brings into attention the most relevant papers in this field, underlying the importance of cluster for smart development. After a short literature review, we introduce the Business Intelligence and Analytics components with the focus on how they can improve the cluster's activity, and what repercussions may have on the regional level. In order to demonstrate our theory, we bring some examples of Business Intelligence and Analytics implementation in the industry and we extrapolate this case to the cluster's scenario, forecasting the results. In conclusion, we present our suggestions to stimulate clusters and create competitive advantages for long run development.

Title: Moral Values in the Folk Tales of Ion Creanga

Author(s): Furtuna, C (Furtuna, C.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 199-203 **Published:** 2016

Abstract: This paper aims to highlight the moral values of the Romanian people, of the wisdom-loving Moldavian, as they emerge from Creanga's folk tales. Our work method consisted in highlighting excerpts from Creanga's texts, bringing to light the moral values of his characters. Ion Creanga is the narrator par excellence; the universe of his creation is the world of folk tales, with heroes having supernatural powers, meant to defeat the evil forces. The other world is in this world, just a stone's throw from home, or as you pass by a forest, the fight between good and evil taking place here and now. His stories are throbbing with life that you can feel at every step. The world of Creanga is "a world of folk tales, with real people, whom you can recognize in the real life, the literary effect of his work coming from the original mix of the miraculous with the most specific reality." (Nicolae Manolescu, Recitind povestile lui Creanga). Ion Creanga's characters are either personifications of beauty, goodness and justice, or symbols of ugliness and evilness. Creanga's work is full of life and this is precisely what the folk tales were missing. He gave life to both his scenes and his characters. His characters are individualized by means of strongly delineated physical and moral portraits, resulting from their behavior in different circumstances and from their language. The scenes are not monotonous, they are vivified by dialogue, and the answers are prompt and precise, individualizing the characters. These characters are peasant-like; they speak the peasants' language. The main hero is an inexperienced young man, an ideal of physical and moral beauty, standing for goodness. By the tests he faces, the hero has to go over the threshold of childhood, becoming a man. The hero's qualities are highlighted gradually, as the hero faces the hostile forces. In our paper, we shall deal with the folk tales of Creanga, an example for the young, highlighting the Romanian people's moral values.

Title: E-Learning. Application of Information Technologies in Education

Author(s): Garabet, L (Garabet, L.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 205-208 **Published:** 2016

Abstract: The purpose of this paper is to explore which factors influence e-learning. A lot of influencing factors are identified in terms of the content analysis. Distance Learning open up new possibilities for an expansion of home-based learning. Use of internet broadband makes it easy for students to access academic information on time.

Costs of accessing educational material are cut down with the implementation of Information Technology. The information are available on the net and students run to communicate directly information.

The result of this study may be used, and learn which factors influencing the performance. Students prefer to communicate with teacher? Cooperation between teacher and developers has the effect of increasing the quality? Which combination is best for students: video conferencing, self-study, computer-based, virtual classroom?

Lack of tonality, disappearance suggestions-E-Learning can solve all problems? The method induces and risks? Besides hardware and software technology and other means of information resources.

The sample used in the research paper: 160 students (13-specialization history, 8-specialization philosophy, 1-specialization sociology, 7-specialization social theology, 9-specialization Orthodox teaching, 47specialization Romanian-English, 18-specialization Romanian-French, 15-specialization English-French, 1specialization communication sciences, 18-specialization English-Romanian, 18-specialization FrenchRomanian, 5-specialization Public Administration - (age range 20-23 years-3rd year of study). Three questionnaires were used with 10 items each.

Title: The Contextual and Formal Conditions Applying to a Will from the Perspective of the Entry in Force of the EU Regulation No. 650/2012

Author(s): Genoiu, I (Genoiu, I)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 209-213 **Published:** 2016

Abstract: The EU Regulation No. 650 of the European Parliament and Council from 4th July 2012 regarding the competence, enforceable law, acknowledgement and enforcement of judicial decisions, as well as the acceptance and enforcement of authentic acts in the field of successions and regarding the creation of a European heir certificate[1], entered in force on August 17th 2015. It regulates, among others, the contextual and formal conditions of the provisions for a death cause (Chapter III, "Enforceable law", articles 26-27). These concern those wills left by a foreigner (belonging or not to an EU member state), but who has his regular residence in a EU member state, but also by a citizen who is a EU member having his regular residence in a third country and who chose to apply the law of his citizenship to his last will provisions.

In this context, the present work shall analyse the provisions of the normative act mentioned above from the contextual and formal conditions applying to it, and shall point out how much they overlap or are different as compared to the provisions of the Romanian Civil Code. At any rate, even if a lack of coherence were to occur between the provisions of the normative acts here discussed, the ones of the EU Regulation shall have priority, as according to the provisions of article 5 of the Civil Code, ". the norms of the European Union law shall be enforced with priority, irrespective of the quality or the statute of the parties". At the same unquestionable conclusion lead also the provisions of article 2557 paragraph (3) of the Civil Code, according to which " The provisions of the current book shall be enforced if the international conventions to which Romania is a part of, the European Union law or the provisions of special laws establish no other regulation".

Title: Moral Values in Today's Social Communication

Author(s): Ghibanu, IA (Ghibanu, I. A.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 215-220 **Published:** 2016

Abstract: The present paper aims to thoroughly approach the need for moral values in the field of contemporary social communication means, given the combined domination of globalization and secularization phenomena or a strong consumerist and materialistic reaction. It deals with the ecclesial, theological, Orthodox and Christian perspective on the media and its socio-cultural role, as well as with the threats and vulnerabilities of social communication via the virtual environment. The study deals with communication, namely with ethics in the field of communications, highlighting the need for moral principles in media communication. The original contribution lies in presenting the Christian, and especially the Orthodox, ethical perspective on the issue, with emphasis on the role of these principles in building an efficient and equitable media tool. Methodologically, we have particularly used deductive and inductive reasoning. The article is the expression of having related with the mass-media, both within the ecclesial mission of the Church and in terms of the research conducted on the issue of exposure. The topic arouses interest, particularly within the mass-media, religious or otherwise, and numerous public debates are held as regards the need for ethical principles in the act of communication.

Title: Constitutional Court of Moldova

Author(s): Gilia, C (Gilia, C.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 221-224 **Published:** 2016

Abstract: The emergence of the Constitutional Courts represented and still represents a basic element to ensure the supremacy of the Constitution and a

primary warrant for the existence of a genuine rule of law. Our study is part of a series of materials through which we aim to analyze the constitutional contentious court in Moldova. In our scientific approach we tried to describe in detail the role of these organism, the ways in which the constitutional judges are appointed, as well as issues regarding the term of a mandate and the statute of the constitutional judges. We chose for this study to analyze the Constitutional Court in the Moldova because there is little information in the Romanian technical literature on these authorities. In the conclusion chapter we'll try to point out common and distinct elements that define the analyzed constitutional contentious court.

Title: The Relationship of Cyberspace and Information Literacy in Libraries with Impact in Non-Formal Education

Author(s): Erich, AT (Erich, A. T.); Gorghiu, G (Gorghiu, G.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 225-231 **Published:** 2016

Abstract: In the information society, the role of the library and librarians is more important, and information professionals have to change themselves, from intermediaries, to facilitators and trainers. Networked communications technologies have transformed the libraries from a closed space into an open one, where the users come to learn, read, socialize etc. The Internet and digitization facilitated the access and exchange of information in a virtual environment, the traditional library becoming so a cyber library. In this transitional stage, digital libraries integrate traditional services with on-line services. The remote access to information, made the physical person going to the library no longer necessary. For this reason, there is a need for information literacy skills for library users, in order to develop theoretical knowledge and practical skills concerning the construction, processing and communication of information. The cyber library becomes an electronic gateway for users located anywhere.

In this paper we try to demonstrate that the information literacy instruction is very important for the library users because it demonstrates the importance of all kind of information (traditional or on-line) and how it can be used in a scientific format. More than that, the paper emphasizes the role of the library on promoting non-formal education activities, with the accent oriented on making known to young students new technologies and their importance for the daily life.

Title: The Nature of the Disputes Settlement System within the WTO

Author(s): Guna, D (Guna, D.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 233-237 **Published:** 2016

Abstract: The settlement of disputes system within the World Trade Organization has generated several controversies regarding its nature, given the fact that it is a mechanism combining both diplomatic methods, like negotiations and mediation, with the judicial ones. In order to qualify this mechanism as a judicial or almost judicial one, we consider useful analysing which was the will of the states in terms of the WTO purposes and, not least, see how the mechanism for the settlement of disputes is used within the organisation and which methods are particularly used by the states for settling this kind of disputes. After analysing these factors, but also the opinions expressed within specialized literature, we consider that the system is an almost judicial one, combining diplomatic methods with the judicial ones, a fact also reflected by the practice of the states resorting to it.

Abstract: Purpose. With a strong social and economic impact worldwide, stroke (AVC) is one of the most important public health problems, being also a major cause of disability. The present study aims to assess some dimensions of quality of life of AVC patients and adapt an exercise program specific to this category of patients in order to improve health and life. Rehab aims to limit the stroke impact regarding the quality of life.

Method. The present study was achieved on a group of 100 patients in the Clinic of Neurology, Timisoara. The questionnaire used was MOS SF-36.

Results. The present study shows that stroke specifically affects physical health, they perceive it as poor and even with a chance to worsen.

Conclusions. The rehabilitation program is a complex set of processes that relies on the participation of several disciplines. These processes are designed to significantly improve the quality of life of people with chronic conditions.

Title: Gender Stereotypes and Ethical Issues in Advertising Communication

Author(s): Iftimie, NM (Iftimie, N. -M)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 243-248 **Published:** 2016

Abstract: Advertising has become one of the most pervasive and persuasive means of communication in modern society. New products, services and even companies can hardly resist without proper marketing communication. But advertising is much more than a mere marketing tool; it also promotes attitudes, ideas, or values and can influence our beliefs, behavior and lifestyle. Modern advertising relies primarily on images (either still or in motion) in order to communicate its messages to the would-be clients. Visual images, sometimes accompanied by short spoken discourse can reach the audience far more easily than a written text. In order to have a quick and memorable impact on the virtual client, advertisements (either in printed media or on television) make use of gender stereotypes in their portrayal of men and women. They reinforce and maintain such stereotypes because in this way the messages they carry can reach the targeted audience more easily.

This paper focuses on two main questions: "Can we speak of gender stereotypes in Romanian television commercials?" "If they do exist, do they represent the norm or the exception?" The analysis will be made from a semiotic and stylistic perspective and will be placed within the framework provided by the resolutions concerning ethical issues in advertising adopted by the governing bodies of The European Union.

Title: The Survey of the Idea of Third Rome on the Communist and Post-Communist Period

Author(s): Ignat, A (Ignat, A.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 249-253 **Published:** 2016

Abstract: In the second half of the fifteenth century and the early sixteenth century, the idea developed that Moscow had a unique religious and political mission as the successor to Rome and Byzantium. The earliest surviving formulation of this idea is probably that in a letter by the monk Filofei (Philotheus), the elder (starets) of Eleazarov monastery in Pskov, written in 1511. On this paper I shall outline how the "Third Rome" idea was rooted in Muscovite culture and how it emerged under the impact of the events of the fifteenth century. The link made in Muscovy between a state and a supposedly universal church had a direct antecedent in Byzantium. As the Byzantine Empire declined, the Eastern Church increasingly took on the aspects of a Greek national church rather than a universal church. At the same time, Byzantine messianism presented Constantinople as both the "New Rome" and the "New Jerusalem". On this paper I will try to present the continuity of the idea of Third Rome on the Russian society, especially on the communist period and after. This study is a research on the Russian history, following the messianic idea of Third Rome - Moscow. The events from XXth century show us how the communist and post-communist society kept this idea and developed according with their own interests.

Title: The Concept of Judiciary Procedure in the Current Law. Boundaries, Typology, Connections

Author(s): Ionescu, S (Ionescu, S.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 255-259 **Published:** 2016

Abstract: The judiciary procedure - as a basic element of the procedural law - is treated as a set of rules concerning the need for legal protection of those ignored, endangered or harmed interests or rights, by stating the stages, the terms and the forms of a judiciary procedure, regardless of the subject-matter in which it intervenes, be it civil or criminal.

In the context of the current regulatory framework and utilizing a comparative approach, the present analysis starts with the concept and identifies the meanings of the term in the two judiciary procedure matters. With the texts of the new codes of procedure as basis, the study proposes a categorical picture of the procedures, thus explaining the multitude of qualifications with which the procedural law operates. Considering of interest and given the frequency of use (often repetitive and redundant), the theme seeks to clarify aspects inherent to the interference between procedure and other related notions, such as: jurisdiction, process, procedural law.

In its entirety, the study is designed as a guide for conceptual delimitations, poised to provide those interested a useful tool to simplify the regulations, to overcome any potential difficulties generated by reading the evoked texts, by their assimilation and, implicitly, by their practical application.

Title: The Role of the Monetary Policy in the Context of the Macroeconomic Policies Mix a Quantitative and Qualitative Approach for Romania

Author(s): Ionita, G (Ionita, G.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 261-267 **Published:** 2016

Abstract: The main object of the research is to analyse and identify an optimal monetary and fiscal policy model that responds to the economic problems of the countries from Central and East Europe and mainly of Romania.

Given the vulnerabilities of the economies at the beginning and during the recent global economic and financial crisis, there is an increased interest to identify the quantitative models that explain the main features of macroeconomic data, most of them based on Bayesian estimation approaches.

The analysed model involves fiscal and also monetary policy macroeconomic variables through governmental expenses and respectively interest rate and

also monetary and fiscal policy shocks given the importance of the uncertainty in modelling a macroeconomic policy rule: price and interest rate shocks (as monetary policy shocks) and exogenous spending shock (including government spending as a fiscal policy instrument).

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 269-273 **Published:** 2016

Abstract: People's perceptions on air pollution could be critical for reducing exposure of individuals and can also encourage behaviour changes. The paper presents the results of public Air Quality (AQ) perception questionnaires developed in the RokidAir project (www.rokidair.ro) to empower the public to participate in and contribute to AQ-related environmental monitoring and decision-making processes, and to increase public awareness regarding AQ-related information. The research methodology was based on questionnaires as a tool for acquiring information on public knowledge and perception on air pollution. The specific objectives of the study were as follows: to obtain information from public on their perception of the AQ in Ploiesti and Targoviste urban areas where they live, work or study; to explore the public interest level in AQ-related issues; to analyze public views on what types of AQ-related information is useful for their daily life; to discover if and how the public obtains existing AQ information; to explore if public are interested in obtaining more detailed AQ information; and to identify if public are willing to change their behavior and avoid exposure to air pollution. The target group was general public interested in AQ-related issues, including both professionals and normal citizens who are interested in air quality related issues. The sampling procedure used typical method applied on investigations in exploratory analyzes. The results revealed that people have a good understanding of key-drivers of air pollution but exists an apparent disconnect between theoretic knowledge and willings in changes of individual behavior. The communication strategy of authorities in the field of air pollution must be essentially improved to obtain changes in the behavior of individuals, which will be the key-drivers for a long-lasting improvement in air pollution levels.

Title: Considerations on Soil Degradation by Desertification in Romania

Author(s): Ispas, S (Ispas, S.); Muratoreanu, G (Muratoreanu, G.); Murarescu, O (Murarescu, O.); Paunescu, E (Paunescu, E.); Nedelcu, A (Nedelcu, A.); Basaraba, A (Basaraba, A.)

Edited by: Sandu A; Frunza A; Ciulei T; Gorghiu L

Source: MULTIDIMENSIONAL EDUCATION & PROFESSIONAL DEVELOPMENT. ETHICAL VALUES **Pages:** 275-279 **Published:** 2016

Abstract: Soil degradation by desertification has become a concern for specialists a few decades ago, when several areas of Africa, Asia, America and Australia recorded long droughts, which determined the accelerated, sometimes irreversible degradation of the soil layer.

Desertification has initially been considered a process specific to the arid and semiarid regions in the world. Later on, the United Nations Conference on Environment and Development (UNCED) of June 1992, organized in Rio de Janeiro, brought back into everyone's attention the importance of keeping desertification under control, launching a concise definition: "desertification consists in soil degradation in the arid, semi-arid and temperate steppe areas, resulting from various factors, including climate variations and human activities".

In Romania, the regions in which the ratio between precipitations and potential evapotranspiration (P/ETP) is lower than 0.65 are considered vulnerable to soil degradation by desertification. According to this criterion, the southern and south-eastern parts of Romania (first of all Dobrudjea and the eastern side of Baragan) belong to the category of high risk desertification regions. The central part of the Western Plain is considered another vulnerable region.

The specific features of these regions include: high drought frequency; low afforestation degree; soil erosion caused by water and wind; the presence of the underground water layer very deep in the ground. As a result, the soil layer has suffered important modifications, such as: changes in the hydric regime; structure degradation in the higher horizon; enlargement of salinization and alkalizing processes; reduction of the useful edaphic volume; decreasing of humus and nitrogen contents, a.s.o.

In order to stop soil degradation enlargement by desertification, a series of measures has to be taken, the most important measures being mentioned as follows: afforested areas settling and irrigations introduction.
